Microorganisms grown in bioreactors are typically limited by mass transfer of reactants across the liquid-gas interface. This interface is difficult to control in the conventional reactor using mass transfer by the rising liquid flow. In the new bioreactor we overcome this limitation using magnetic microparticles coated with glycerol. The magnetically trapped particles increase the surface area for gas-liquid mass transfer and allow high density of micro-organisms to be cultivated in a column.Q: How to prove the function  $f(x)=e^{x/2}$  from  $\mathbb{R} \rightarrow \mathbb{R}$  is a continuous function.
